PRELIMINARY AMENDMENT

Dear Sir:

In the Claims:

Cancel claims 1-6

please add the following new claims:

-- 7. A disposable diaper comprising:

a body portion having two enlarged end portions and a narrowed intermediate portion
therebetween, the body portion being shaped so that said diaper may extend about a waist and
crotch of a wearer and have an inside and an outside with respect to the wearer;

each end portion having a respective waistband portion at an edge thereof so that when
the diaper is worn, the waistband portions gird the waist of the wearer:

at least two body-portion layers including a layer of liquid-absorbent material and a
plastic layer having an edge at the edge of the diaper;

a soft padding member located along at least one of said waistband portions, being
adjacent to said plastic layer edge, the soft padding member being distinct from all of said body-

11 portion layer, the soft padding member including a material formed from a soft substance so that
12 the soft substance is located between the diaper wearer and the plastic layer edge, so that the
13 diaper presents a soft surface at said inside of the diaper waistband portion despite said plastic
layer edge.--

Remarks

New claim 7 is based on claim 26 in the parent case, referenced and quoted by the Board in its decision of September 29, 1998, reversing the art rejections. New claim 7 has been slightly modified in the last element of the claim with respect to the soft padding member. Claim 7 now claims that the soft padding member is located between the diaper wearer and the plastic layer edge. In view of the small differences, a terminal disclaimer can be provided to overcome any obviousness type double patenting rejection. No same invention rejection should be made because the prior claim 26 did not specify the invention in these same words.

Respectfully submitted,

Dated: June 29, 1998

DISPOSABLE DIAPER WITH PADDED WAISTBAND AND LEGHOLES

I hereby certify that this paper or fee is being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 CFR 1.10 on the date indicated above and is addressed to the Assistant Commissioner for Patents, Washington, D.C. 20231.

Background of the Invention

Name Gary Wallace
(typed or printed)

Field of the Invention

Signature Gary Wallace

This is a continuation-in-part of my copending application, S.N. 093,681, September 8, 1987.

This invention relates in general to a disposable diaper and more specifically, to a disposable diaper having a padded waistband and legholes.

Description of the Prior Art

Disposable diapers have largely replaced the common cloth diaper to be worn by infants and toddlers. Disposable diapers not only can be easily discarded, but are adjustable and convenient to attach and remove. Known diapers of the disposable variety are typically capable of effective retention of liquid and solid material without having to resort to protective covers as was required by cloth diapers. Although known disposable diaper designs are generally satisfactory, several problems haven arisen in their use. The waist band and border around the legholes of prior art disposable diapers are commonly an unprotected plastic band and the like. Such bands are uncomfortable when worn and often such material is stiff, and scratches and abrades an infant's skin. In addition, known waist bands and leg bands in disposable diapers do not provide an optimum barrier against leakage and seepage, which is so desirable.

Summary of the Invention

It is therefore an objective of the invention to provide a disposable diaper having padded waist and leg areas. The padding as herein disclosed covers the the plastic waistline band from inside to outside of the diaper when worn by the baby. The padding may be in the form of strips of soft pliable material, such as cotton and the like, and extends substantially around the waist. The soft padding protects the infant and toddler from scratches, irritations, and abrasions commonly inflicted by known diaper designs. The strip of padding further performs the added function of inhibiting leakage from within the diaper. The protection provided by the padding not only exists within the waist line portion of the diaper, but is also present at the top and outside of the diaper where the skin may overlap when worn.

The disposable diaper herein disclosed further includes strips of soft material, such as cotton and the like, at the edge portions of the diaper that surround the legs of the wearer to accomplish similar functions as the padding at the waist areas.

Brief Description of the Drawings

Fig. 1 is a perspective view, with parts of the waistline padding removed, of the disposable diaper of the invention.

Fig. 2 is a rear plan view showing the inside of the diaper of Fig. 1 in a flat configuration;

Fig. 3 is a partial end view, with parts in section,

showing the portion of the diaper forming the legholes in the configuration of Fig. 1.

Fig. 4 is an end view, with parts in section, showing the edge portions of the diaper forming the waist band areas.

Description of the Preferred Embodiment

Referring now to Figs. 1-4, there is illustrated the disposable diaper with padded waistline and legholes of the invention, generally designated by reference numeral 2. In its closed configuration as it is worn in the form of Fig. 1, the diaper 2 is formed with a typical front section 4, a back section 6, a crotch area 8, and a top portion 10 forming an adjustable waistline construction. Leg holes 12 are defined by edge portions 14 of disposable diaper 2. The diaper 2 is formed in multiple superimposed sheets of material in front section 4, back section 6 and crotch area 8, including an outer liquid impervious outer sheet 16a and an inner liquid permeable sheet 16b as is well known. One or more layers 18 (Figs. 3 and 4) of a liquid absorbent material, such as cotton, pulp and the like, is imposed between the outer sheet 16a and the inner sheet 16b as is conventional. The thickness of inner material 18 may be thickened in the crotch area 8 and elsewhere for greater liquid absorption.

The diaper 2 in its flat configuration as shown in Fig. 2 is formed as a single body 20 having enlarged end portions 22 which terminate at edges 24 that form the top waist band portion 10 shown in Fig. 1. The intermediate section 26 of body 20 includes tapered edges 28 and a central section

having opposed edges 32 that form the edge portions 14 of the leg holes 12. A pair of plastic adhesive strips 34 and the like having a detachable free end 36 are affixed on one enlarged end portion 22 of the body 20 to permit the diaper 2 to be adjustably affixed to the opposite end portion 22 to secure the diaper to the infant as in the configuration shown in Fig. 1.

Referring now to Figs. 1, 2, and 4, the waistline portion 10 is formed by border sections 40, 42 of the inner and outer sheets 16a and 16b which are affixed together. The border sections 40, 42 are fabricated from a plastic material or similar material. A outer strip 50 of soft material in the form of a strip of cotton or other non-abrasive material is bent lengthwise over the border sections 40, 42 of a plastic material and the like located on each of the enlarged sections 22 in Fig. 2 in affixed relationship by an suitable technique of attachment. The strip 50 forms surfaces 50a, 50b, and 50c that are respectively positioned from inside to outside of the diaper 2 so as to provide a soft cushion or pad substantially over the exposed surfaces of border sections 40, 42 to protect the skin of the infant or toddler and provide an additional absorbent barrier to alleviate leakage. The strip 50 may be formed as a pair of strips to generally extend 360 degrees at the waist in the configuration of Fig. 1 (one of the strips 50 being cut away in Fig. 1 for illustrative purposes).

Referring again to Figs. 1, 2, and 4, the edge portions 12 for leg holes 14 are similarly constructed as the waist

band as previously described. The plastic borders 60,62 are affixed together (Fig. 3) and are covered in affixed relationship by strips 64, 66 of a soft material, such as cotton, to cover the exposed surfaces of borders 60,62 to serve the same function at leg holes 14 as soft strips 50 at the waist band.

What is claimed is:

1. A disposable diaper comprising

body means being formed as a single piece having two enlarged opposed portions and an intermediate portion disposed between said end portions, said body means being arranged to be worn by an individual,

waist band means being formed on opposite edge portions of the opposed end portions,

attachment means affixed to one of said opposed end portions and having members to be affixed to the other of said opposed end portions, said waist band means forming a substantially continuous waist band to be positioned generally around the waist of the individual,

said waist band means including external padding means extending along said opposite edge portions for generally covering the exposed surfaces of said waist band means, said padding means extending substantially the extent of said waist band means when worn by the individual.

2. The disposable diaper according to Claim 1 wherein said padding means includes strips of material formed from a soft substance, said strips of material being arranged over said waist band means.

3. The disposable ^{diaper} ~~diaper~~ according to Claim 2 wherein said strips of material are folded lengthwise over said opposite edge portions of said opposite end portions.

4. The disposable diaper according to Claim 2 wherein said intermediate portion includes opposite edge sections defining leg holes when said body means is worn, second padding means being provided over said edge portions of said intermediate portions to provide soft material in contact with the individual.

5. The disposable diaper of Claim 4 wherein said second padding means is at least one soft strip of material affixed to each of said opposite ^{edge} edge portions of said edge sections of said intermediate portion.

6. The disposable diaper of Claim 5 wherein said at least one strip of material is lengthwise bent over each of said opposite edge sections.

Abstract of the Disclosure

A disposable diaper having a front section, rear section, crotch portion, and a waist band. A soft padding is provided on the waist band. Padding is also provided on the edge portions surrounding the leg holes.
